

## DID YOU KNOW?

### Table for 5,000, please.

Good floor mats help keep dirt outside a building. Did you know they can also reduce illness-causing bacteria carried in on shoes? Dr. Charles Gerba, a microbiologist at the University of Arizona, found that as many as 5,000 bacteria can cling to *one square inch* of footwear. We care about keeping germs outside your building. That is why our professional cleaning processes include treatment of entryway mats with surface-protectant technology that forms a polymer around fibers and kills micro-organisms without toxicity.
