

Did You Know?

**These little guys
(and their friends)
are a big deal to us.**

You can't see dust mites, but they have a big impact on indoor air quality. Their by-products are the leading cause of indoor allergies. To combat this problem, we use sponges dry carpet care technology created by HOST. With perhaps the world's most thorough vacuuming system and the sponges technology, we are able to reduce dust mites 78%, dust mite allergen 75%, cat dander 85%, and mold spores 85%. This process is EPA registered, Establishment No. 074202-WI-001. The sponges system also requires almost no water, another plus. Improving indoor air quality is not something you would know we do from looking, because it goes beyond the visual. We do it because it makes our results better and more sustainable.
